

BACKBOARDS

IDENTIFICATION AND INSTALLATION

1. GENERAL

1.01 This section provides information on common use backboards. Refer to Division 506 for information on backboards for coin collectors and coin telephone sets.

1.02 This section is reissued to:

- Add new code 183-, 184-, 186-, and 187-type backboards
- Show blued and bright finished wood screws replaced by cadmium plated tapping screws.

2. IDENTIFICATION

2.01 The purpose of these backboards is to provide adequate mounting surfaces for the installation of telephone sets, connecting blocks, and various other apparatus.

2.02 ♦When terminating and cross-connecting cables on the customer's premises, especially in large buildings, it is recommended that the backboards installed in these locations be standardized. These backboards are now available in several sizes and colors, and should follow the color scheme plan outlined in Section 461-100-101.♦

3. INSTALLATION

3.01 ♦Backboards used to mount apparatus or equipment other than the colored backboards used on the customer's premises where installations are to be standardized should be used only as required.♦

Do not use a backboard unless:

- Mounting surface is uneven.
- Mounting surface is damp.

SECTION 463-130-100

- A secure mounting could not be obtained otherwise.
- It is necessary to insulate special apparatus from current-conducting surfaces.
- It is necessary to avoid drilling too many holes.

3.02 ♦ Backboard used on the customer's premises where standardization is important should follow the color scheme plan in Section 461-100-101 where all central office cables terminate on the same color backboards, key equipment on same color, etc, regardless of terminating area terminal room, apparatus closet, etc.♦

3.03 Locating: Location of backboard is dependent upon apparatus to be mounted thereon; however, select a location which will not expose workmen or equipment to injury or damage.

3.04 Installing:

(a) Refer to Table B for proper fastening device and quantity to be used for each backboard dependent upon:

- Type of surface
- Strength and rigidity of base material
- Weight to be supported.

(b) Refer to appropriate section on attachments and fasteners ♦ in 080 Division ♦ for method of installing fasteners.

Note: When fasteners extend into or through a surface, avoid damaging existing equipment and wiring.

(c) When a particular backboard is not listed in Table B, refer to backboard most similar for mounting information.

(d) If existing mounting holes in backboards do not align when securing mounting, drill additional holes with proper tools.

(e) If backboards are located on an uneven surface, shim to obtain a firm mounting. Use fasteners 1/2-inch longer than specified in Table B.

(f) Backboards located outdoors should be secured with rust-proof fasteners such as galvanized screws or bolts.

(g) If backboard must be mounted on a finely finished surface, such as glazed tile or marble which would be expensive to repair, consult supervisor and obtain instructions before proceeding.

(h) When backboard is mounted on plaster on wood lath, all screws must enter laths or studding (see Fig. 3).

(i) When mounting buzzer on wooden backboards, countersink backboard mounting screws to prevent screwheads from contacting buzzer base (see Fig. 8).

(j) The B beam clip and the B insulator support can be installed on I beams and angle irons of 1/8- to 1/2-inch thick to fasten backboards at indoor locations. The B beam clip will accept to a 10-24 or a 1/4-20 size screw. The B insulator support will accept a 10-24 screw. (See Fig. 36, 37, and 38.)

(k) Holes designated by bosses (Fig. 39) on the rear of a 182B backboard must be drilled to permit mounting 500-type wall sets. Use an 11/64-inch drill bit when drilling the bosses.

(l) A small section of the thin wall at the top or bottom edge of the 182B backboard may be broken out to allow entry of inside wiring (Fig. 39).

(m) The telephone set is not mounted on a 182B backboard; instead, the backboard is held in place by the fasteners which support the telephone set.

To prevent damage to line switch assembly when installing set on a 182B backboard:

- Place fasteners through backboard into supporting surface.
- Run up threads until head of fastener is 1/16-inch from backboard.
- Place the telephone set on fasteners using keyhole slots.

- *Support screwdriver and tighten fasteners (Fig. 40).*

3.05 Removing:

- Carefully remove all wire, screws, bolts, and other fasteners used in mounting backboard.
- In case backboard tends to stick to wall after fasteners have been removed, press palm of one hand tightly against backboard and strike upper end of backboard with a hammer.
- Whenever it is necessary to leave a backboard in place, remove all fasteners which hold the apparatus to the backboard. This prevents the possibility of personal injury, damage to furniture, etc.

1. Additional fasteners may be placed to ensure mounting.
 2. When using toggle bolts, cut off excess length.
 3. Size shown for wall screw anchors is diameter only. Length will be determined by wall thickness.
- * When mounting on plastered masonry, use fasteners 1/2-inch longer than specified.
- † When mounting on plasterboard, plaster on lath, etc, fasteners must be embedded in stud at least 1 inch.
